Clarification No 6

Reference: Open call for tenders No EEA/MDI/14/005

Title: *IT and GIS consultancy services on implementation of Copernicus Reference Data Access (RDA) Component and on supporting EEA in other Copernicus related activities (2 lots)*

Question 1

It is not clear, as not freely available the beta version, if EU-HYDRO dataset contains lines of rivers, polygons of other water bodies, and also the coastline polyline/polygon. Which are the features included?

Answer 1

The EU-Hydro dataset contains:

- *the EEA39 photo-interpreted network with Point (River nodes), Polyline (River segments, Canal segments, Ditches segments) and Polygon information (Coastal Water Bodies, Rivers areas, Canals areas, Ditches areas, Inland Waters/Lake areas)*
- *the EU-DEM Digital Elevation Model for EEA39*
- *the EEA39 Drainage network derived from the EU-DEM (River nodes, River segments, Catchments)*

Question 2

After accessing the EU-DEM available, it seems that no mask was yet defined between land and sea for the elevation product. Or is there any coastline/mask from EU-DEM already available to be improved? This is necessary to know while looking for a pragmatic solution to guarantee consistency between EU-HYDRO and EU-DEM coastlines.

Answer 2

There was no mask delivered by the contractor of EU-DEM.

Question 3

Could you please clarify if Annex 4 (financial identification form) shall be provided by each consortium member, or by the Consortium Leader only?

Answer 3

The Financial Identification Form shall be provided by the member acting as coordinator/leader of the consortium only, while the Legal Entity form and its supporting documents must be provided by all members.
