Clarification No 2 for open call for tenders:

Framework service contract for GMES Fast Track Service Precursor on land monitoring

Reference number: EEA/SES/09/003

Question 1:

What is the level of radiometric correction for the satellite images provided by EEA (e.g., radiance, top of atmosphere reflectance, etc.)?

Answer 1:

Processed images were provided by ESA. To our knowledge, no radiometric correction was done. For geometric correction, a cubic convolution re-sampling was done for re-calculating the radiometry of the rectified images.
