# 1 Overview

This chapter covers the emissions of pipeline compressors, which is mainly important for greenhouse gases (methane leaks). Guidance on estimating these greenhouse gas emissions can be found in the 2006 IPCC Guidelines.

Emissions may also occur from combustion in compressor stations. Guidance on estimating these emissions can be found in the small combustion chapter (NFR source category 1.A.4).

## 2 Point of enquiry

Enquiries concerning this chapter should be directed to the relevant leader(s) of the Task Force on Emission Inventories and Projection's expert panel on combustion and industry. Please refer to the TFEIP website ([www.tfeip-secretariat.org/](http://www.tfeip-secretariat.org/)) for the contact details of the current expert panel leaders.
