Jeroen Kuenen

# 1 Overview

This source category provides a 'catch all' for other industrial processes. All emissions that cannot be placed under a specific source category can be put in this chapter. Thus, this may be a very extensive chapter covering lots of different activities.

The contribution of this source category is thought to be insignificant, i.e. less than 1 % of the national emissions of any pollutant. Therefore, no further information regarding emissions is provided in this chapter.

If emissions are reported under this source category, the best way forward would be to search for literature concerning these specific sources. If no information can be obtained from literature, another way to estimate the emissions can be 'expert judgement'. These issues are described in the general guidance chapter on uncertainties in Part A of the Guidebook.

## 2 Point of enquiry

Enquiries concerning this chapter should be directed to the relevant leader(s) of the Task Force on Emission Inventories and Projection's expert panel on combustion and industry. Please refer to the TFEIP website ([www.tfeip-secretariat.org](http://www.tfeip-secretariat.org)) for the contact details of the current expert panel leaders.
